PTS: Pack & transport system

Anyone who deals with shipping on a daily basis knows the challenge: Different processes such as packing and dispatch often have to be handled with different systems. This is where different handling procedures and compatibility problems of the individual systems become a major hurdle. Those who want to be efficient and competitive need an intelligent solution.

Use the functions

FORMAT's pack & transport system supports you in the complete handling of your shipping orders. Thanks to the modular structure of the system, the application options are already very extensive in the standard version and enable a flexible division of work processes between the shipping department and the packing station.

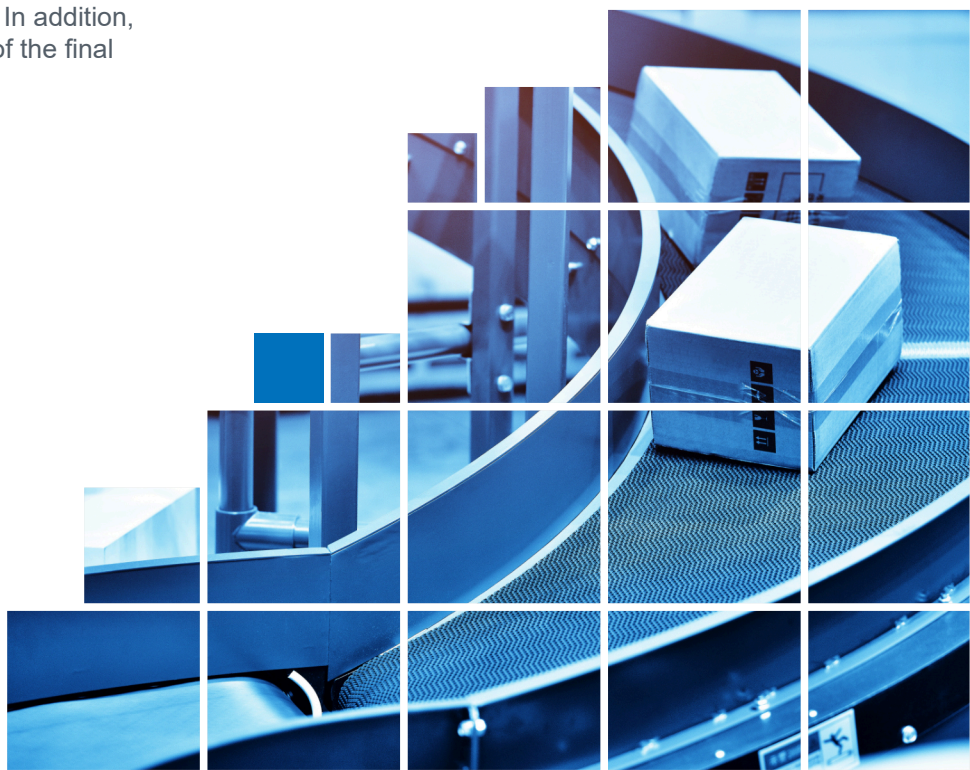

Use the connection for electronic scales with automatic transfer of weight values. Using a hand scanner or touch screen makes operation even easier. Packing data are recorded and shipping labels are printed immediately either directly at the packing station or separately from the packing station using the mobile data collection device (MDC).

Optionally, articles can be assigned to a package, including quality assurance of picking and creation of a packing list. Take advantage of the check for required customs documents and automated notifications of personnel responsible for export.

Automatic calculation of freight costs – the calculated costs can be reported back to the feeder system and are available for statistics and evaluations. In addition, it is possible to monitor loading by means of the final loading check.

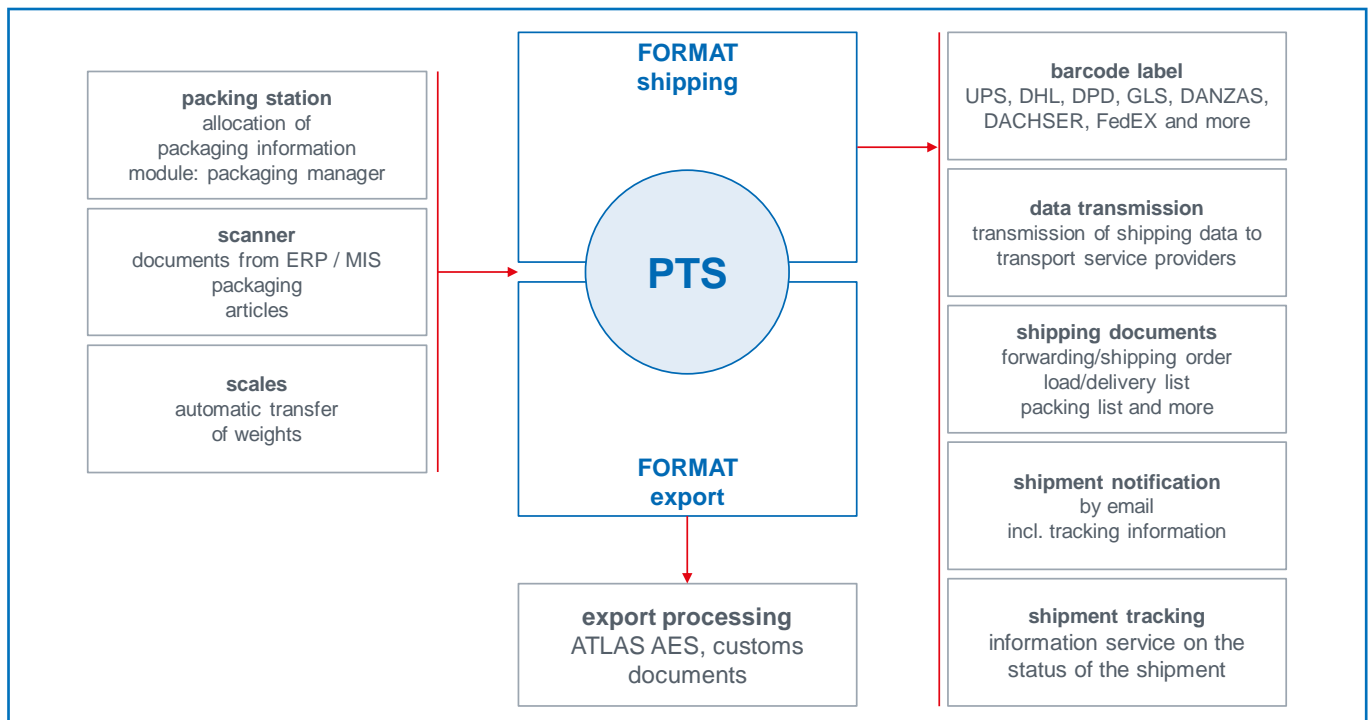

Secure the advantages

- **Efficient:** Time and cost savings thanks to simplified processes and integrated plausibility check
- **Independent:** Uniform processing independent of the transport service provider
- **Clearly arranged:** Overviews of the packages to be loaded and monitoring of loading processes as well as evaluation options through the creation of shipping statistics
- **Traceable:** Documentation of loading and creation of a loading log

PTS: Pack & transport system

Licence model (excerpt)

- The PTS is part of the FORMAT-IVEAS product family – only be purchased with the basic module
- Document printouts
- Connection to shipping provider
- Packing station / mobile data collection (MDC) / connection to electronic scale
- Freight cost calculation / data interfaces
- Number of clients / number of users

Technical functionalities

- Interfaces for data transfer from ERP / PPS or WWS ensure problem-free integration – flexible adaptation to existing IT environments
- Shipment information is fed back into the feeder system and can therefore be retrieved by other departments
- Flexible connection to various transport service providers and smooth data exchange

Company profile

We at FORMAT Software Service GmbH have been developing, distributing and supporting software solutions for foreign trade, customs clearance and shipping since 1988. Our extensive product range covers the most diverse areas of customs management. We offer a selection of various licence models.

Just under 100 are actively involved in further development at FORMAT under the management of Horst Scharf. Our company is a member of the Federal Association of Customs Software Manufacturers (BVZH).

FORMAT product portfolio

Export control ▪ Tariff classification ▪ Electronic customs tariff ▪ Dual-use ▪ Sanctions list checks
 Import ▪ Export ▪ NCTS ▪ EMCS ▪ Shipping ▪ Packing station ▪ Logistics ▪ Supply chain management
 Track & trace ▪ Confirmation of arrival ▪ Customs warehouse ▪ Intrastat ▪ Outward / inward processing
 Preference calculation ▪ Supplier declarations ▪ ATLAS-ZELOS ▪ Request for information
 Data conversion ▪ VAT ID checks
