We give transparency to your supply chains

FORMAT-SCM: Supply chain management system

In most companies, the supply chain plays a major role. The integrated and process-oriented planning and control of goods, information and money flows along the entire value chain are the requirements for minimising costs and optimising processes within a company. Good supply chain management will increase the success of any company. Yours too.

Use the functions

FORMAT-SCM supports you in the processing of data from various systems and service providers.

The result is a transparent presentation of your supply chain that enables you to view the individual steps and intervene manually or automatically in the processes and that is also independent of time, place and terminal device.

As a track & trace solution, FORMAT-SCM allows you easily manage, evaluate and track your consignments, giving you a clear overview. Especially when large quantities of consignments are shipped with different transport service providers, it is essential to know where the consignments are located, when they are delivered and with what content.

This not only ensures the provision of data to other participants in your supply chain, such as customers, suppliers, producers, service providers and customs offices, but also provides the necessary transparency.

You can download further information regarding FORMAT-SCM at www.format-scm.de.

Secure the advantages

- **Controllable:** Indicators and evaluations with the aid of management dashboards. You can individually configure your own dashboards for reporting purposes.

- **Adaptable:** A process-based end-to-end view of the flow of goods allows you to actively intervene in and optimise processes.

- **Transparent:** External supply chain participants can be integrated automatically. Manual data transfer is not necessary.

- **Web-based:** You have access to the solution via all terminal devices, regardless of your location.

We give transparency to your supply chains
